

Berry Foot Picker 6-10

Model B-FP-6-10

The Berry Plumbing & Equipment **Foot Picker Model B-FP-6-10** is constructed entirely of stainless steel, aluminum, and rubber for durability and easy cleanup. Paws from your Berry Paw Harvester are transported to the Berry **Model B-FP-6-10 Foot Picker** where they are fed into the infeed chute. The paws fall into a picking chamber where a rotating system of fingers gently push them against a bank of fixed fingers above while moving them steadily downward to the discharge chute where they emerge clean and cuticle free.

Berry Foot Picker Model B-FP-6-10

Construction:

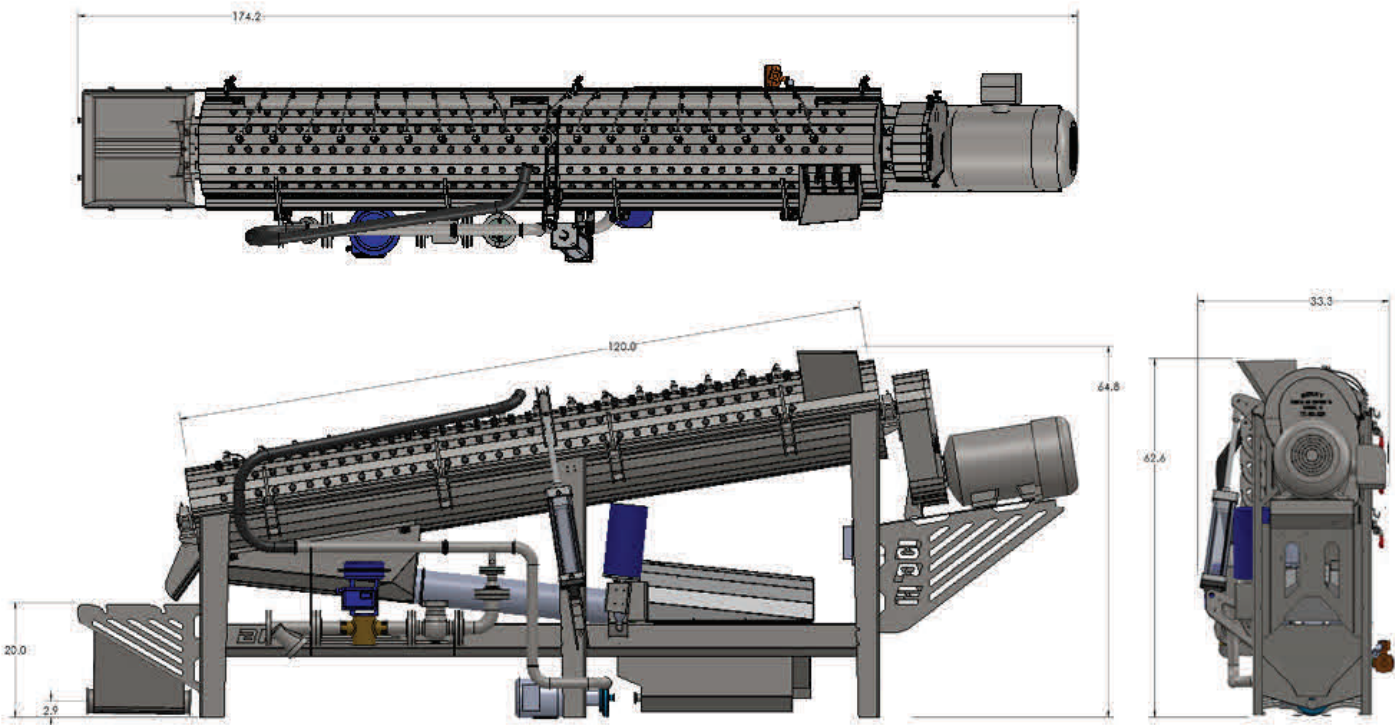

The frame and cabinet of the Berry Plumbing & Equipment **Foot Picker Model B-FP-6-10** is constructed entirely of stainless steel for durability and easy cleanup. Picking fingers are made of rubber.

Operation:

Paws are deposited into the **Model B-FP-6-10 Foot Picker** from the **Paw Harvester**. Here they are gently cleaned as they traverse a system of fixed and rotating fingers and pressurized water which remove all remaining cuticle from the paws. Waste falls from the **B-FP-6-10 Foot Picker** through the perforated basin into a catch pan under the picker. Paws emerge thoroughly cleaned with very little damage to the product.

Maintenance:

Berry Plumbing & Equipment Company designers and technicians have taken great care in assuring that the **Model B-FP-6-10 Foot Picker** is manufactured with smooth rounded surfaces and easily removable covers to make thorough clean up easy for cleaning personnel. Maintenance required is cleaning, regular greasing of bearings and chains and checking for worn fingers.
